Club Management System - CMS

CMS designed to be an inexpensive, web enabled solutions for your Club's reservations, bookings or scheduling requirements, whether you are managing a large complex, multiple locations or just for your Gym, our Solutions are the best solutions for you.

CMS gives you the ability to effectively manage your Club's major letting assets whilst providing your members and clients with instant advice on availability and confirmation on rental availability, hiring charges or bookings making a reservation is as simple as three mouse clicks away.

The POS capabilities give you accurate billing and charges for bookings as well as other items or services you charge for. It's management reporting features mean that you are quickly able to manage and supervise all facets of sales and hire accounting.

Online registrations, lesson & class scheduling, multiple payment solutions, pool management, & more. Sports & Cultural Activities CRM has it all.

Gym Management System - GMS

GMS is software for complete management of your Gym, Fitness center or studio, Health club, Martial arts school, Dance school, Yoga studio or any other sport club. This all in one solution helps you in your work to track memberships, member visits, and product sales, create various fitness packages, services, track employee work time, make scheduling, and bookings, send email messages to members and many more...

If you wish to make your daily work easier and to leave a good impression on your customers, GMS is the right choice for you

Features

Advanced packages creation

Define extensive fitness packages with various time limits in days, weeks, months or even period of a day or limits by number of training sessions.

Great analytics

Gather and maintain detailed records for visits, services, payments and work time. Analyze data and generate reports to gain insights to improve your business.

Parking Management System -PMS

EPS is ideal for municipal parking, airport parking, gated communities, university and college parking, and more.

As the vehicle enters or leaves, Ultra-high frequency (UHF) RFID readers can identify a windshield tag from about 8 feet to 30 feet away,

and RFID tags, and whether the system uses a single gate or multiple gates. Single gates tend to be used in areas where security is not a major concern, and vehicles will be passing through at low speed.

Multiple gates may be required in high-security areas and/or areas where high-speed entrance may occur.

Visitor Management System - VMS

VMS is a check-in application that not only speeds up the check-in process but also provides a modern look to your admin block's front desk.

It stands as a contrast to the regular process of filling in details manually in the register in order to visit someone.

VMS allows the users to setup the meeting considering meeting time and place and make sure that there is no overlapping between other meetings at the same time or place and send notifications to the visitors.

Residents Management System -RMS

RMS is designed to efficiently control the entrance and exit gates of compounds within a wide range of read distances and access speeds.

The most notable benefit of RMS is that vehicles can be permitted to enter or exit the compound without human intervention. In other words, instead of swiping an ID card or pushing numbers on a keypad, all one has to do is simply approach the gate, where UHF readers will authenticate the vehicle and allow it to pass through. This eliminates the need for compound security and avoids having to inconvenience drivers, especially those who are too short to reach the card swiper or keypad from where they are sitting and, therefore, must routinely get out of the vehicle to make the gate open.

Micro SHRP®

SMART Human resources Management Essential Package Micro SHRP® is a brilliant multifunctional Human Resources Management System that improves all your needs in managing Personnel, Attendance, payroll Services. Micro SHRP® designed to fit all HR. Business needs for small and Medium Co. to manage and calculate all transactions for 200 employees information and working hours, it provides accuracy on calculating Pay slip by dynamic adding salary elements on the payroll system to save time and efforts in Observing all infractions to help management in getting a real time information to correct employee's attitude and performance

Package Modules

- 1- SMART Personnel Essential System
- 2- SMART Attendance Essential System
- 3- SMART Payroll Essential System
- 4- SMART Alarming System
- 5- SMART LIST Reporting Tool

Smart IT will be more than happy to help our customers to find the best solutions for their own cases. With the aid of our base of previous expertise in this field we guarantee full customer satisfaction.

Data Gathering System - DGS

DGS is a software used to manage attendance/access machines and collect logs from different machine brands like Suprema, Anviz & ZK.

Access Control

All modern organizations need to protect their physical and IP assets along with ensuring the safety of their employees by controlling movement of people with pre-defined rules. DGS provides comprehensive and flexible Access Control software solution specifically designed to meet the access control needs of any organization, irrespective of its size, layout, locations and timings. This solution allows organization to control access on three dimensions simultaneously user, zone and time.

Time - Attendance System

People are the most valuable asset and their time is just that much a valuable resource that fuels further growth of the organization. To avail the benefits of time-attendance policies, biometric machine for attendance must be chosen wisely. Managing people's attendance and timings is a basic, yet critical challenge for any organization. One cannot underestimate the complexity of time and attendance due to organizational structure, hierarchy and disparate operational needs.
